

How to reconnect your Sungrow Inverter to WiFi

To reconnect your SunGrow inverter to your home Wi-Fi, you will need the procedure is the isolarcloud app, which can be downloaded from the App Store or Google Play Store.

- Begin by selecting settings on your device (iphone/ipad) and then go to Wi-Fi to choose the SunGrow network, which will be labeled as S G followed by the inverter serial number. Select this network.
- Once connected, return to the home screen and open the IsolarCloud app. Then, select "more" at the bottom right and choose "WLAN configuration".
- Since you are already connected to the SunGrow network in step one, simply click "next" and select your home Wi-Fi network, input the network password, and press connect, ensuring to verify the password with the little eye symbol at the end once it's inputted to confirm your PW is correct.
- If the password input is successful, a green tick will appear, then you can click "next" and "complete" at the end.
- Lastly, select "home" at the bottom left, choose your plant, and you should be back online.
